INSTALLATION GUIDE:

PRO-YD-FM99-1PC AM and CCFL (ALL COLORS)

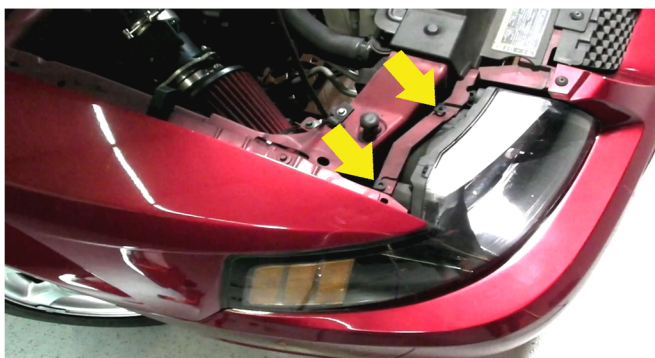

Tools Required

Slice connector clips

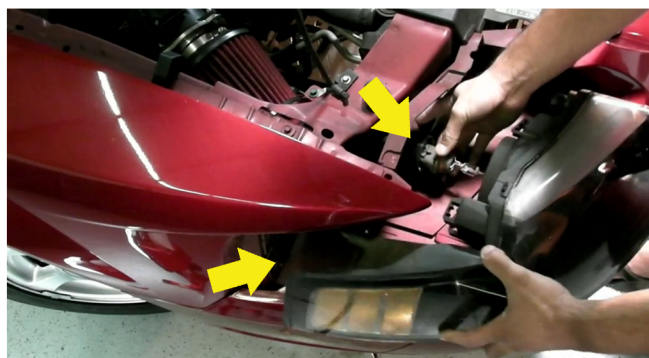

Please Note

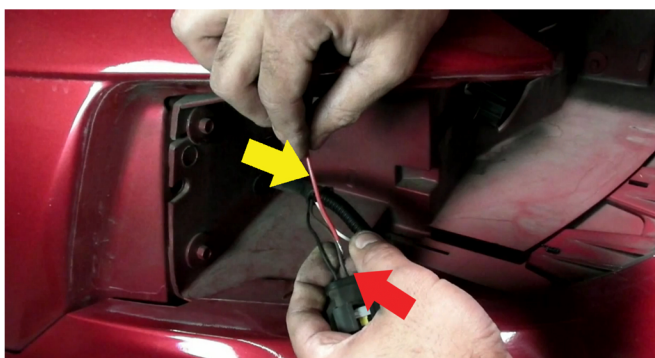

If you are unfamiliar with the installation processes, professional installation is highly recommended.

1) Begin by opening your hood and locating the (2) metal fasteners that secure the head light to the frame. Remove them by pulling up and out, this will release the head light.

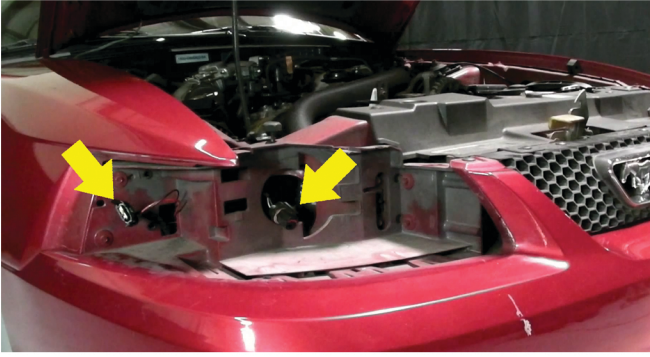

2) Once the metal fasteners are removed the head light can be slid out. Remove the Low/High beam and corner light sockets from the back housing of the head light indicated by the arrows.

3) Next, the halos will need to be connected. Twist the (2) red halo power wires together from the Spyder head light. Next, Taking the parking light socket from the vehicle, locate the Brown wire in the center of the socket. You will need to splice the Red power wires to the brown wire using a Splice connector.

4) After the power wires have been connected, twist the (2) Black halo ground wires together from the Spyder head light. Again taking the parking light socket from the vehicle, locate the Black wire on the outer left of the socket. Splice the Black ground wires to the Black harness wire using a Splice connector.

5) Next, remove the Low/High beam clip from the bulb with socket, connect that clip into the Spyder head light harness. Insert and secure the corner parking light into the corner housing of the head light, seat the head light on the vehicle

6) Replace the (2) metal fasteners to secure the head light to the frame of the vehicle and you are done.

Congratulations on completing the installation for your new Spyder head lights for the 1999-2004 Ford Mustang.
